

Tinnolabs R & D software hosts accurate, relevant, and up-to-date information regarding formulation costs, previous formulation, R&D documentation, manufacturing processes, and more. Effective formulation management is key to efficient and successful product development.

Why do we need a R & D software

- Controlled access to Project documents.
- Real time project status updates and monitoring.
- Record all information related to R&D Projects in one place.
- Compare formulation output with product parameter requirement.
- Makes it easy for compliance and Audit requirements.

Salient Features

-  Compliant to ISO 9001 Design requirements.
-  All documents related to the Product development projects are captured and stored securely.
-  All calculatable properties are derived based on the trial formulation by the software.
-  Can be integrated with ERP to collect costing data for real time costing and push final BoM to ERP.
-  Trial formulation, Pilot formulation and Final formulation are all stored systematically.
-  All test data, test reports, Technical Datasheets, Material Safety Datasheets, and other product documentations are stored under the project id.
-  Easy retrieval of most relevant data as per R&D requirements.
-  Controlled distribution of Technology transfer documents as per individual functional requirements.
